

Temporary Crowns or Bridges (Fixed Prosthesis)

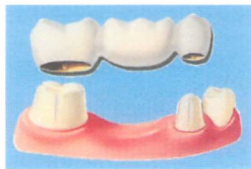

You have just received a plastic restoration that will serve you for a short period of time.

Chewing: The temporary cement requires about 30 minutes to set. Please do not chew during that period of time.

Color, Shape & Size: The color, shape, and size of the plastic temporary restoration do not resemble the final restoration in any way.

Tooth Sensitivity: Temporary restorations may leak food or saliva into your tooth which may cause sensitivity. You may also have sensitivity to hot, cold or sweet. Once you have your final restoration, this sensitivity should resolve.

Temporary restorations are NOT strong. They may break or come off completely. If this happens, call us **immediately** so we can replace the temporary restoration. If you are not where you can contact us, go to the nearest pharmacy and purchase "Fixodent" to glue the temporary restoration back in place. This adhesive will retain the temporary restoration until you can see us. **Please do not leave the temporary restoration out of your mouth because the teeth will move or break and the final restoration will not fit.**
